## The Burbank Konnect 2020 Charger

Introducing

# The Burbank Konnect 2020 Charger

“Check the status without picking up your phone – See it from across the room”

### TARGET MARKET:

- All users of USB devices (tablets, phones, gadgets of all kinds).

### FEATURES:

- A one of a kind charger for any USB electronic device
- View charge status from across the room
- Charge 4 devices at one time.
- Internal rechargeable battery allows charging on the go.

### PATENT INFORMATION:

A patent application was filed in March of 2021 and is in patent pending status.

### SUMMARY:

The **Burbank Konnect 2020 Charger** is an invention intended to charge any electronic device plugged into it such as: Smart phones, tablets, audio players, etc. What makes this charger unique is it has a very large, clear, visual cue on the charge status. By having split sections of red, yellow and green, a user can see how far their device has been charged without having to go over and pick it up, or turn it on.

Since most devices use a USB port to plug into any charger, this one has a standard USB port to allow multiple devices to be charged. Once the device is fully charged it will light up the 100% section but not over-charge the device. With the Burbank Konnect 2020 Charger you will never have to pick up, or turn on, your phone to check the status of its charge and can tell how full it is from across a room!

With traditional chargers, or even wireless chargers, you still have to walk over and check your phone manually to see what percent the phone has been charged to. In some cases when receiving a phone call you may not even know how much battery percent there currently is and don't know if the phone will die on you or not in the middle of an important phone call. Is the plug behind something like a chair, or small bench? No problem! Since the fields glow and have a large area it will disperse the light in a wide area allowing the light to peek out from furniture which may be covering it.

It also has a rechargeable battery built-in. This allows you to simply unplug it, drop it in a purse and you can charge on the go.

**About the Developer**

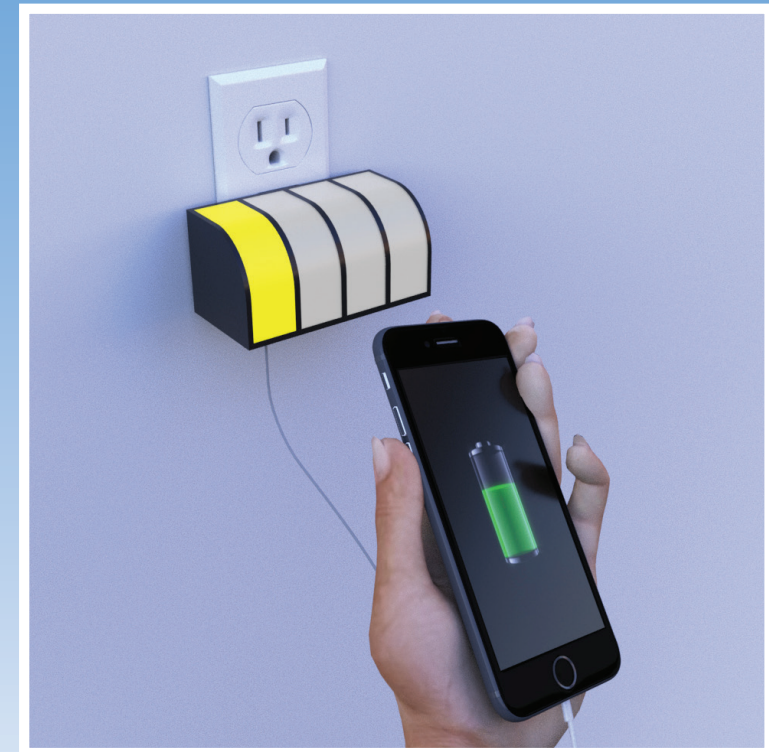

The inventor, Claudine J. Lewis Lives in Bakersfield, California and had an idea for a better way to check the status of your charging device. Claudine contacted the Mars Rising Network and had a provisional and design patent application filed and had the invention designed properly so that she may see success with this great idea and turn it into a real product. She is actively seeking a company that would have an interest in licensing the product for a royalty..
